

DP-49

CFT A5 Soil

DP-49 is a ready-to-use version of A5 Soil

With the new DP-49 CFT A5 Soil we managed to develop a testmaterial that responds well to various concentrations of All-Purpose Cleaners for vinyl flooring and boards. The soil is based on the ASTM Standard D4488. This stain is very suitable for use in a scrub tester like the Sheen or the TQC.

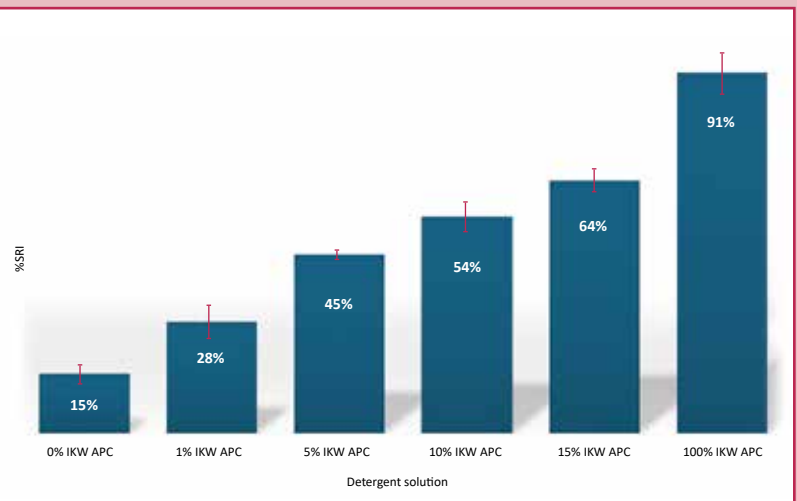

Test procedure

TQC sheen: no extra weight, just the holder;
10 cycles; 21 cycles/min.

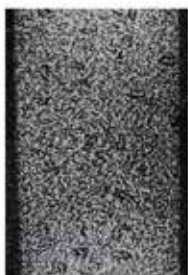

Detergents: IKW reference APC 0%, 1%, 5%,
10%, 15%, 100%.

Sponge: wrung-out wet CFT sponge (soft side).

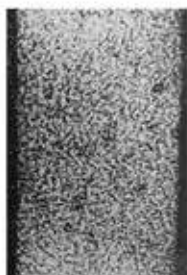

Soiled tile: wet the tile with 3ml detergent
solution and start time. Pour an additional
6ml detergent solution onto the wrung-out
wet sponge. After exact 1 minute place the
sponge with holder into the TQC and start the
10 scrub cycles. Remove the tile and rinse
with tap water.
