Standard monitors

Use a standard monitor or design your own unique configuration!

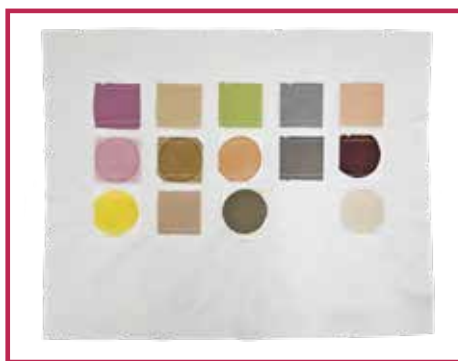

Multi-swatch monitors are a popular test material in the detergent industry. Most customers design their own unique monitors tailored to their wash test specifications. It's all custom made to meet your demand.

For laundry detergent testing in general we have a few standard monitors like the SM-04 (2024) All purpose monitor. The swatches we selected for the SM-04 2024 All purpose monitor demonstrate the performance of newly designed enzymes even better, ready for future developments.

According to the 2020 AISE protocol we also produce the AISE stain set monitor called MON-AISE A+B. This monitor contains 14 different stains from different producers. On top of that, we offer this same monitor with 6 additional stains: MON-AISE A+B Plus. Using this A+B Plus monitor gives an even better distinction between the performance of different detergents than the standard AISE set.

MACH 5HD

CFT has improved the technology and camera for measuring multi-swatch monitors and multi-stain monitors. The MACH 5 is now equipped with a HD camera not only for higher resolution images but also better colour measurement. Measure dE, Reflection, LAB, XYZ etc. This device is especially suitable to measure these types of (standard) monitors, Multi-Swatch and Multi-Stain Monitors. All soils and stains can be measured in only one measurement. This will save you precious time.
